SUMMER INTERNSHIP PROJECT

INSTITUTE CERTIFICATE

This is to certify that the Summer Internship Report entitled,

**“A Comparative Study of Financial Statements of Vindhya Telelinks Ltd, Rewa,
Madhya Pradesh”**

which is being submitted herewith for the partial fulfilment of the degree of Post Graduate Diploma in Management (PGDM) at D Y Patil PGDM Institute, Akurdi, Pune is a result of the original research work completed by **Pranaya Tiwari** under supervision and guidance of

Institute Guide and to the best of the knowledge and belief, the work embodied in this Summer Internship report has not been formed earlier for the award of any degree or similar title or this or any other University or examining body.

NAME OF FACULTY GUIDE

Ms. Mayuree Tawade

Dr. Shalaka Parker

Director, DYPPGDMI

EXTERNAL EXAMINER

ACKNOWLEDGEMENT

I'm really thankful for the help I got during this internship, also when putting together the report. A big thanks to Hemant Singh & Associates in Rewa - gave me a real shot at working on live finance stuff with genuine client details. Being hands-on there boosted how I see financial reports, plus it made my number-crunching skills way better.

I'm really grateful to Mr. Hemant Singh - his clear directions plus steady support made it way easier to handle those tricky financial papers. Because of his input, my work got noticeably better during the internship.

I'm just as grateful to D Y Patil PGDM Institute in Akurdi - especially my faculty guide, Ms. Arpana Basnet - for always pushing me forward with steady support. Because of her, I tackled the project with a sharper eye and more questions in mind, which made it easier to connect what we learn in class with how things work out there.

I'm really thankful to the team members who helped me out with their teamwork and real-world tips. Because they were open about what they knew, I got hands-on experience that actually taught me something.

At last, big thanks go to my folks and mates - those who stayed close, cheering me on every step along the way.

DECLARATION

I hereby declare that this Summer Internship Project Report titled

“A Comparative Study of Financial Statements of Vindhya Telelinks Ltd, Rewa, Madhya Pradesh”

was a project I did myself while interning at Hemant Singh & Associates in Rewa, MP - ran from July 10, 2025 to September 10, 2025.

This project wasn't handed in anywhere else for a certificate or title, yet it grew from what I noticed, worked through, because of the money records I got while interning.

All details pulled from outside materials were properly credited - sources got a nod where it's due.

Name: Pranaya Tiwari

PGDM (Finance)

Signature: _____

Date: _____

EXECUTIVE SUMMARY

Reports on money matters help show how strong a business is or if it can last over time. This work looked closely at how Vindhya Telelinks Ltd did financially, comparing its results from 2022–23 to those of 2023–24 - a firm known in telecom cables and big project building jobs. It checked shifts between years in sales, earnings, what it owns, debts, and owner value, yet also tried spotting key reasons behind good or bad outcomes during that stretch.

The project happened with support from Hemant Singh & Associates, a chartered accountant practice based in Rewa, MP. While interning, I spent lots of time handling money records, bank slips, along with yearly filings - then built matching summaries, graphs, and side-by-side data sheets. This hands-on stretch sharpened how I read dollar figures, spot number patterns, also deliver clear takeaways useful for leadership choices.

Revenue from business activities jumped sharply - roughly 41% during that time - mostly thanks to stronger earnings in EPC. Still, sales in the cable division lost steam, due to changes across the industry, tighter rivalry, along with fluctuating customer needs. Even though overall income climbed solidly, gains barely moved, pointing to steeper project expenses coupled with heavier spending on daily functions.

Overall, assets went up nearly 46%, mainly because of more cash tied up in stock and money owed from EPC deals. On the flip side, debts climbed sharply - particularly long-term ones - as borrowing rose to fund ongoing projects. Meanwhile, equity crept upward slowly, showing a cautious approach to keeping profits inside the business.

Profitability, along with how well cash is managed and debt levels, got checked using standard number comparisons. Even though the business can cover near-term bills right now, earnings aren't growing much - pointing to tighter spending being necessary. On top of that, leaning more on loans has made financial pressure worse, which could turn risky if income from projects becomes unstable.

The research used common finance check methods - looking at ratios, up-down and side-to-side trends, also comparing yearly shifts. Most numbers pulled straight from the firm's yearly release, trade journals, or chats with money advisors at the accounting office. Some hurdles showed up, such as not getting full docs on internal rules plus no benchmarking against other sectors.

The results suggest Vindhya Telelinks could gain from India's growing telecom and infrastructure sectors; however, lasting profits rely on improved cash flow handling, tighter expense oversight - along with spreading out income sources to lessen reliance on EPC earnings.

This internship boosted how I see financial analysis while showing me real-world auditing and assessment tasks. It mixed classroom ideas with actual company work - building my ability to use number-crunching methods later on in finance jobs.

CHAPTER 1 - INTRODUCTION

1.1 Introduction to the Study

A company's financial reports show how well it's doing, where it stands strong, or where it might struggle. These documents let you see just how good a business is at earning money while keeping resources under control - also how it deals with debt versus equity to protect investors' interests. With markets getting tougher and tech shaping every field, knowing what numbers mean matters more than ever; this kind of review has turned into a go-to way of judging if a company truly performs well.

This report looks at **Vindhya Telelinks Ltd** - a major maker of telecom cables and complete EPC services based in Rewa, MP. It runs projects nationwide, helping build communication networks and physical infrastructure. By analyzing data from two back-to-back periods - **FY 2022–23 and FY 2023–24** - we checked how it's growing, using resources, making profits, alongside its overall money health.

While interning at **Hemant Singh & Associates**, I got hands-on experience with analyzing finances, making sense of data, matching bank records, along with drafting side-by-side reports. Working through genuine financial paperwork helped me connect theory from lectures to how businesses really operate. This led to a clear breakdown that measures the firm's money-related growth across two years, highlights spots needing focus, then suggests smart next steps.

1.2 Background of the Project

Financial review lets investors see if a business is doing better or worse than before, also compared to what they hoped for. Looking at balance sheets along with profit reports and money movement reveals whether a firm can pay bills, make gains, manage expenses, handle funding choices, plus stay strong over time. Sectors such as telecoms or engineering firms often involve big spending and lengthy projects - so checking finances matters way more there.

Vindhya Telelinks Ltd showed clear gains in income and assets over the review span, thanks to wider network rollout along with rising need for fiber plus EPC work. Looking at two back-to-back fiscal periods brings out sharper insights into what pushed progress, which segments lagged, or where upgrades are needed both in daily operations and long-term planning.

1.3 Rationale for Selecting the Company

I selected Vindhya Telelinks Ltd for this project based on the following reasons:

1. Industry relevance:

The telecom plus EPC sector's growing fast because of digital shifts, wider 5G use, also rising infra projects across India.

2. Data availability:

The company's finances could be found via Hemant Singh & Associates, so real info was easy to get.

3. Practical learning:

The size of the business, along with how it runs and its mix of income sources, opened up plenty of chances to use tools such as comparing ratios, spotting patterns, then making sense of them.

4. Local visibility along with community reach:

Basing my internship in Rewa, Madhya Pradesh - the same spot the company runs from - meant I got real-time experience that fit right into the local setup.

5. Skill alignment:

The task fit right into my goal of building know-how in checking finances, handling company money stuff, or making sense of numbers.

1.4 Rationale for Selecting the Topic

A look at financial statements helps managers, analysts, investors, or auditors spot shifts in how a company performs. Picking this subject let me mix classroom concepts with real-world numbers from actual businesses.

Major factors behind picking this subject:

- Super useful for those studying money stuff in college
- A live look at how a phone-network company operates right now
- Can use several analysis methods at once
- Boosts your ability to create reports, deliver presentations, OR explain findings clearly
- Makes it easier to see how figures shape choices in companies

1.5 Problem Statement

Although Vindhya Telelinks Ltd keeps bringing in more sales, its profits haven't moved much. Because it's added extra debts, money troubles could hit - especially if earnings don't rise fast enough.

So the initiative tries to:

- Get what's showing up in their money reports
- Compare year-on-year performance
- Spot what pushes costs up or pulls income in
- Show chances to boost money flow or streamline daily work

1.6 Objectives of the Study

Primary Objective

To compare Vindhya Telelinks Ltd's financial reports from 2022–23 and 2023–24, spotting differences along with what they mean.

Secondary Objectives

- To check how profitable, liquid, or solvent a business is by using ratio analysis.
- To explore how key parts of the balance sheet expand - alongside shifts seen in income statement items.
- To spot where money works well - yet see where it falls short.
- To see which parts of the company helped it grow, look at what each team actually did instead.
- To offer tips that boost how well things run.

1.7 Scope of the Study

- Covers FY 2022–23 and FY 2023–24
- Focusing on the balance sheet along with how profits and losses stack up, while also looking at where equity stands
- Covers ratio checks, side-by-side reports - also how to make sense of them
- Offers a look into daily operations but only covers money-related info
- Leaves out forecasts ahead of time or pricing estimates

1.8 Significance of the Study

This report benefits:

- **Leadership:** Gives clues that help you choose wisely when handling money
- **Shareholders:** Lets them check how well things are going plus see if money matters look strong
- **Students or those doing research:** works like a real-life example
- **Trainee:** Develops problem-solving skills through real-world experience

1.9 Limitations of the Study

- Just a pair of money-focused years got looked into
- Data comes only from public sources; internships might restrict entry
- Private data from outside or inside can't be accessed
- Fewer hours meant less chance to gather fresh details

1.10 Structure of the Report

The report's split into sections - starts with intro, then company background, basic theory, how the study was done, what the numbers show, explanations, results, wrap-up, tips for next steps; after that come extra materials and sources.

CHAPTER 2 - COMPANY PROFILE

2.1 Introduction

Vindhya Telelinks Limited (VTL) stands out in India's telecom cable and EPC sector - based in Rewa, Madhya Pradesh. Starting off making cables, it now handles varied infrastructure jobs throughout multiple states. Instead of just one focus, the firm tackles different areas using solid tech skills alongside a broad range of products. Because it works closely with big-name telecoms and utilities over time, trust builds naturally.

Vindhya Telelinks plays a key role in connecting the country as India pushes forward with tech growth and physical upgrades. Making high-grade copper wires, fiber lines, energy conduits, along with solar wiring, it supports modern communication needs. Beyond production, the firm handles full-scale engineering jobs - building networks from scratch, setting up complete facilities, or putting utilities into action across regions.

2.2 Company Profile

Full Legal Name	Hemant Singh and Associates (Internship Firm); Vindhya Telelinks Limited (Client)
CIN (Corporate Identification Number)	Not publicly listed (Hemant Singh); L31300MP1983PLC002134 (Vindhya Telelinks)
Company Type	Chartered Accountancy Firm (Hemant Singh); Public Limited Company (Vindhya Telelinks)
Registered Address	Near Pratap Heritage Marriage Garden, Nehru Nagar, Rewa, Madhya Pradesh, 486001 (Hemant Singh); Udyog Vihar, P.O. Chorhata, Rewa, Madhya Pradesh, 486006 (Vindhya Telelinks)
Directors	Mr. Hemant Singh (Hemant Singh); Shri Harsh V. Lodha (Chairman), Shri Y.S. Lodha (MD & CEO), and board members including independent directors like Shri Pracheta Majumdar

2.3 Company Logo

2.4 Company History

Vindhya Telelinks Ltd came into being back in 1983 through a partnership involving MPSIDC along with Universal Cables Ltd. In those early days, it made jelly-core phone cables, mainly supplying them to BSNL as well as independent telecom firms.

In the 1990s, when India's way of connecting changed gradually, VTL began working with fiber cables - this shift helped meet newer digital needs. By the early 2000s, spotting a rise in demand for physical setups, the firm moved forward into building projects instead.

Starting from one factory in Rewa, the company now runs several units - branching out to full-project solutions. Its growth shows how it adjusts when markets shift, picks up new tech as it comes, or tackles big infrastructure needs.

Major evolutionary milestones include:

- 1983–85: Set up the telecom cable section right after forming the company - this move laid the groundwork early on
- 1993–95: Started making cables that use light to send data
- 2000–07: Expansion into EPC contracting
- 2010–15: Growth in output power along with broader range of offerings
- Since 2017: Boosted EPC results - expanded via large local initiatives

This timeline captures how VTL slowly shifted - starting as a maker of cables - to becoming a go-to name for adaptable network setups, thanks to steady changes over time.

2.5 Vision, Mission & Values

Vision

A top name in solid telecom and network builds - helping India grow by thinking fresh, staying honest, working smart.

Mission

- To create, build, or supply dependable cables with advanced tech - each step handled carefully yet simply, using smart methods without extra fluff
- To carry out top-tier EPC jobs safely, while keeping things quick and clear
- To keep things getting better, try out new tech methods - so you can pass real benefits to those involved

Core Values

- Customer Commitment
- Operational Excellence
- Integrity & Accountability
- Innovation & Adaptability
- Sustainability & Social Responsibility

These core ideas show how much the company values its workers, neighborhoods, plus everyone it serves.

2.6 Registration & Legal Information

Corporate Identification Number (CIN): L31300MP1983PLC002134

Company Type: Public Limited

Registered Office:

Udyog Vihar, near Chorhata post office

Rewa, Madhya Pradesh – 486006

2.7 Board of Directors

Vindhya Telelinks is led by seasoned experts who bring a mix of tech know-how, management insight, along with strong oversight experience.

Key Members of the Board:

- **Head:** Shri Harsh V. Lodha
- **Managing Director & CEO:** That's Shri Y. S. Lodha calling the shots
- Independent Directors
- Executive Directors

The Board sets long-term goals, while also monitoring how decisions are made, plus keeps an eye on fairness throughout daily work activities.

2.8 Organization Structure

Vindhya Telelinks' structure reflects its operational breadth, emphasizing functional efficiency and accountability.

Simplified Organizational Structure:

Board of Directors

Managing Director / CEO

Chief Operating Officer

Functional Departments

- Finance & Accounts
- EPC Division
- Manufacturing & Operations
- Supply Chain & Procurement
- Sales & Marketing

- Human Resources
- Quality & Compliance
- R&D / Engineering

Every team gets help from leaders plus experts who make sure tasks run smoothly. Workshops keep staff informed about what's new in the field.

2.9 Product Portfolio

Vindhya Telelinks provides various cable items along with EPC project solutions.

A) Cable Products

1. Jelly-Filled Telephone Cables

Fits voice transfer - comes in several pair options

2. Optical Fibre Cables (OFC)

Faster data movement core built for phone plus internet systems

3. Power Cables

Fits well in work sites, factories, or business setups

4. Solar Cables

Found in solar or wind power setups

5. Specialized Cables

Fits your needs with custom fixes - built just right when regular stuff won't do

B) EPC Services

The EPC division handles:

- Network infrastructure development
- Ready-to-go setups - planning, buying materials, building, checking performance
- Structured cabling
- Power setups for factories and big operations

VTL uses solid engineering skills along with sharp project oversight to handle major infrastructure jobs throughout India.

2.10 Manufacturing Facilities

The business runs major production sites in:

- **Rewa, Madhya Pradesh**
- **Goa (Optical Fibre Cable Unit)**

Facilities run on up-to-date machines, use self-operating assembly chains, include inspection labs, also feature built-in quality control setups.

2.11 Geographic & Operational Presence

Vindhya Telelinks shows up in many parts of India - thanks to ongoing projects, dealer setups, or teamed-up collaborations.

- Rewa: Primary telecom cable manufacturing base
- Goa: Fibre cable unit
- Delhi: Corporate commercial hub
- Nationwide: EPC job spots for power systems, comms gear setup - also backbone frameworks

2.12 Competitors

Key Indian peers include:

- Sterlite Technologies Ltd
- HFCL Ltd
- Paramount Communications Ltd
- Aksh Optifibre Ltd

The marketplace stays tough, thanks to tech upgrades - price pressure also plays a role, while customer expectations keep things intense.

2.13 Key Achievements

- ISO 9001 & ISO 14001 certifications
 - Leading suppliers listed in order by big phone companies
 - Major EPC project execution across India
 - Firm footprint in the scene since the late seventies
-

2.14 SWOT Analysis

Strengths	Weaknesses
Strong EPC growth	High dependence on telecom demand
Diverse product portfolio	Limited global market reach
Experienced management	Exposure to commodity price fluctuations
ISO certifications	Moderate export performance
Opportunities	Threats
5G & fibre rollout demand	Intense competition
Government infrastructure spending	Regulation uncertainty
Diversification into solar & power EPC	Raw material price volatility

Vindhya Telelinks' strong EPC presence and product diversification support stable performance; however, dependence on specific sectors and external cost pressures may hinder long-term profitability.

CHAPTER 3 - THEORETICAL / LITERATURE BACKGROUND

3.1 Introduction

The base theory shapes how we look at finance - it lays out the ideas, models, and tools needed to judge how well a business does. When diving into this work, things like reading financial statements, crunching ratios, measuring against peers, or getting industry context make up the core pieces.

This chapter discusses:

- Nature plus aim of money reports
- Components of financial statements
- Theories about how money stuff gets checked out
- Ratio analysis mixed with how we understand it
- Upward plus sideways review
- Working capital concepts
- Why knowing industries matters
- How money reports connect to choices people make

This idea setup makes sure the methods used afterward fit well with known money models.

3.2 Financial Statements - Meaning & Purpose

Financial statements are organized summaries showing how a company's doing money-wise. They give a snapshot of how well things are running, cash flow health, earnings, along with long-term balance. People use them to see if the business makes money, uses assets smartly, or keeps growing steadily. Each report reveals clues about success, efficiency, while hinting at future trends.

Key purposes include:

- Evaluating business performance
- Understanding financial health
- Supporting internal decision-making
- Providing transparency
- Ensuring statutory compliance
- Facilitating investment decisions

3.3 Components of Financial Statements

1) Statement of Profit & Loss (Income Statement)

Displays income alongside costs plus the resulting gain during a set timeframe.

Key components:

- Revenue
- Operating expenses
- Profit before tax
- Profit after tax

Shows how well a business can make money.

2) Balance Sheet (Statement of Financial Position)

Shows what's owned, owed, also owner's stake right now.

Components:

- Current & non-current assets
- Current & non-current liabilities
- Equity

It gives a look at how well cash is managed, whether debts can be covered, also the way funds are set up.

3) Cash Flow Statement

Follows money coming in and going out through daily activities, asset purchases, or funding actions - while linking each part to where it belongs.

Makes it easier to understand how money flows + keeps track of available funds.

Even though this report skips a complete look at cash flows, adding it gives useful background.

3.4 Financial Statement Analysis

Financial analysis makes sense of number info - spotting patterns while checking how well a business creates worth. Common steps involve:

- Ratio analysis
- Comparative statements
- Common-size statements
- Trend analysis

This helps highlight:

- Revenue patterns
- Cost behavior
- Capital efficiency
- Competitive resilience

Financial review shows if a firm's money situation is getting better or worse - also pointing out spots needing action.

3.5 Comparative Statement Analysis

Comparative statements show data next to each other across multiple time frames.

This shows which way things are shifting along with how big the shift is.

Example:

- Revenue ↑ 41%
- Material price dropped by 21%

These comments work well for:

- Pinpoint spots where work runs smoother
- Understand growth trends
- Spot odd changes or unexpected moves

3.6 Vertical Analysis (Common-Size Statements)

Vertical analysis shows each entry as a share of a main number.

For Income Statement:

Revenue → 100%

Costs → share of income

For Balance Sheet:

Total assets equal a full hundred percent

What you own minus what you owe → portion out of overall worth

Uses:

- Removes inflation/size effects
- Let's you compare data from different years - also between businesses

3.7 Horizontal Analysis

A side-by-side review tracks how each entry shifts from one year to another.

It shows how much something grew or shrank compared to last year, either as a percent or a fixed number.

Relevance:

- Shows growth/decline trends
- Shows trends - like growing debts - over time using different clues
- Supports forecasting

This document uses side-by-side review to check results from 2022–23 against those from 2023–24.

3.8 Ratio Analysis

Ratio analysis turns plain figures into useful insights.

Key categories:

Profitability ratios

1. Gross Profit Margin
2. Net Profit Margin
3. Return on Equity
4. Return on Assets

Liquidity ratios

1. Current Ratio
2. Quick Ratio

Solvency ratios

1. Debt-equity ratio
2. Interest Coverage Ratio

Efficiency ratios

1. Inventory Turnover
2. Receivable Turnover

Every group checks separate parts of how things work.

Ratio analysis gives clues about things like:

- What's the earnings on every rupee sold?
- Are immediate debts covered without issues?
- Does the money owed stay within safe limits?

3.9 Working Capital Analysis

Working capital = Current Assets – Current Liabilities

A firm with more working capital can handle short-term bills better - so it's seen as financially steady.

Yet a surplus of working cash might point to poor performance.

Key indicators:

1. Inventory days
2. Receivable days
3. Payable days

In firms that run on EPC models - say, VTL - what's owed to them usually takes up a big chunk of short-term assets, mainly because invoices go out slowly.

3.10 Sector Overview: Telecom & EPC

1) Telecom Sector Context

India's phone network scene grew fast because of

- Smartphone adoption
- Data consumption
- 4G/5G rollout

This sparked a need for telecom fiber networks. Firms such as VTL gain from these conditions through delivering cables while handling setup tasks.

2) EPC Segment

EPC means designing stuff, getting supplies through sourcing, also putting up structures.

Features:

- Long-term projects
- A lot of cash tied up in daily operations
- Variable margins

A solid EPC team brings steady income - yet margins hinge on managing expenses tightly.

3.11 Role of Government Policy

Programs from the government like

- BharatNet
- 5G rollout
- Infrastructure expansion

spurred higher need for fiber along with construction efforts.

Policies on internet access or power supply can boost VTL in a good way.

3.12 Theoretical Relevance to the Study

This study applies:

- Financial statement review → Understand structure
- Comparative analysis → Year-on-year change
- Ratio evaluation → Performance indicators
- Interpretation → Strategic insights

Together, they give a layered look at VTL - using different angles to show how it works, while mixing depth with real-world function.

3.13 Literature Insight

Existing literature highlights:

- Looking at money stuff helps you choose better
- Ratios can hint at what might come next
- How a company is funded shapes how much shareholders earn
- Sector conditions shape how well things work out

Research into phone companies highlights cash flow issues from slow payments; project-focused reports reveal inconsistent profits because deals change fast.

3.14 Summary

This idea gives a way to see how money reports show how well a company is doing. Because of this, it supports closer looks at VTL's shifting finances and sets up what comes next in the review sections.

CHAPTER 4 - RESEARCH METHODOLOGY

4.1 Introduction

A way of doing research shows how info got gathered, checked, and made sense of to hit the goals here. The setup used for comparing VTL's money records is spelled out clearly. Here's what the plan looked like - what kind of numbers were used, where they came from, methods put into action, limits faced, boundaries set, plus starting points taken as true.

This approach aims to make sure results follow clear logic, stay open to review, while resting on solid finance basics - using methods that support trustworthy outcomes through careful reasoning instead of assumptions.

4.2 Research Design

The study uses a descriptive approach while also applying analysis throughout its structure.

1. **Descriptive** - digs into VTL's finances over two fiscal periods, outlining shifts in major indicators while showing how numbers evolved from one year to the next.
2. **Analytical** - interpreting comparison outcomes through ratios, spotting patterns over time, also applying logical thinking based on theory.

This two-part method makes sure numbers along with clear explanations back up the end results.

4.3 Nature of Study

The research uses numbers, mainly pulling financial figures from yearly reports while working with math methods like ratios or side-by-side checks along with table-based breakdowns.

Soft factors matter too - particularly when making sense of number results or looking at wider market shifts such as regulations or economic ups and downs.

4.4 Objectives Recap

Primary Objective

To compare Vindhya Telelinks Limited's financial reports from 2022–23 with those of 2023–24.

Secondary Objectives

1. To check how well a company can pay bills, stay out of debt trouble, while making money by looking at key financial numbers
2. To check how assets shift, while looking at debt changes - also tracking ownership value adjustments
3. To check how each part adds to earnings
4. To spot how things run well or poorly, also where money works right or wrong
5. To give clear tips on what steps to take

4.5 Scope of Study

The project covers these areas:

- Look at the money records from 2022–23 followed by 2023–24
- Looking into the balance sheet along with how profits and losses are tracked, checking what's owned versus owed while also reviewing where money comes from
- Fraction math using comparisons to figure out differences
- Scene set around telecom plus EPC areas

The project skips forecasts, leaves out market valuations, doesn't touch stock analysis, yet offers just enough background on competitors to set the scene.

4.6 Data Types

Researchers looked at two main kinds of information:

1. **Primary Data**
 - Talks held alongside the internship mentor (CA)
 - Hands-on experience while handling checks and reviews
 - Observations from office work environment
2. **Secondary Data**
 - Annual Reports of VTL (2022–23 and 2023–24)
 - Financial websites such as BSE, Moneycontrol
 - Released writings about money handling
 - Blog posts or official state updates
 - Secondary data forms the quantitative basis for analysis.

4.7 Data Collection Sources

Type	Description
Internal	Annual reports, financial statements, bank reconciliation data
External	Industry publications, websites, textbooks, CA discussions

The combination of internal and external resources ensures both contextual and factual depth.

4.8 Tools & Techniques Used

To check the financial reports, we applied these methods:

1. **Comparative Statements**

To check each entry from two money periods - spot how they differ.
2. **Ratio Analysis**

To check how well cash flows, debt is managed, money's made, also operations run.

3. Trend Analysis

Finds out if money results are getting better or worse.

4. Tabular & Graphical Representation

Data showed up in bar charts or pie visuals, also some tables - made things easier to grasp.

5. Descriptive Statistics

Pulled together money details.

4.9 Research Method

Step-by-step approach:

1. Collected financial statements for FY 2022–23 and FY 2023–24
2. Prepared structured data tables in Excel
3. Looked at how income figures stacked up against balance sheet numbers
4. Figured out profit margins, cash flow strength, along with debt coverage
5. Pictured big shifts through diagrams or plots
6. Read outcomes while thinking about how the field actually moves
7. Put together results along with practical tips

This method kept the data reliable while making sure analysis stayed steady - using clear steps throughout.

4.10 Sampling Design

Because the goal was to look at the whole company's money picture instead of just a part, this project went with:

- Census technique applied to accounting records

All major parts of the financial reports got covered, while each was checked closely.

Few records meant checking every item wasn't a problem - data was easy to handle so no partial checks were needed.

4.11 Data Analysis Framework

The study moved through these levels:

1. **Extraction:** Raw numerical values extracted
2. **Structuring:** Organized in Excel tables
3. **Computation:** Ratios, changes, percentages computed
4. **Visualization:** Charts plotted
5. **Interpretation:** Logical explanation of results
6. **Reporting:** Summarized in findings and conclusions

4.12 Assumptions

- Accounting methods stayed the same throughout both years
- Data reported turned out right - checked by auditors
- Market situations stayed fairly steady
- No major incidents really affected results

These ideas keep the analysis steady through the time being compared - using them links each part without gaps or jumps.

4.13 Limitations

The research faced issues like these:

- A short two-year window to conduct the research
- Limited entry to inside admin files
- Leaving out a closer look at what rivals are doing
- Possible money effects that aren't completely shown

These limits don't really weaken the study's results, yet they point to spots worth exploring later.

4.14 Outcome of Methodology

Using the study approach brought about:

- Measuring how money figures shift from one year to the next using numbers
- Finding which parts work well - also where things fall short
- How prices and earnings changes make sense
- Ratio-based insight of liquidity and solvency

The approach brought clear results, gave a solid framework, while keeping the review of VTL's finances steady throughout.

4.15 Summary

This section introduced the setup for gathering and checking money details. Through mixing side-by-side reviews, number crunching, while adding real-life meaning, the approach helped hit the research goals accurately.

CHAPTER 5 - DATA ANALYSIS & INTERPRETATION

This section takes a close look at how **Vindhya Telelinks Ltd** did money-wise across two fiscal periods - using actual numbers to show trends, though instead of listing data point by point, it highlights shifts through comparison

FY 2022–23 along with FY 2023–24.

The analysis includes:

1. Comparative statements
2. Year-on-year movement
3. Up or down checks alongside side-to-side reviews
4. Ratio analysis
5. Segment-level analysis
6. Interpretation of trends

The figures show big money changes - also forming the foundation to check how well the business runs and handles cash.

5.1 Comparative Income Statement Analysis

A comparative statement helps understand annual changes in revenues, expenses, and profits.

Particulars	FY 2022–23 (₹ Lakh)	FY 2023–24 (₹ Lakh)	Change (₹ Lakh)	Change (%)
Revenue from Operations	290,011.06	408,652.93	118,641.87	+40.89%
Other Income	1,381.13	2,361.62	980.49	+70.98%
Total Income	291,392.19	411,014.55	119,622.36	+41.04%
Cost of Raw Materials Consumed	59,173.28	46,770.43	-12,402.85	-20.96%
Materials & Contract Expenses	199,491.06	326,231.88	126,740.82	+63.54%
Changes in Inventory	-20,503.46	-25,051.97	-4,548.51	+22.18%
Employee Benefits	11,064.73	15,772.76	4,708.03	+42.54%
Finance Costs	7,311.54	8,804.12	1,492.58	+20.41%
Depreciation	1,772.02	2,417.33	645.31	+36.42%
Other Expenses	12,730.80	15,453.91	2,723.11	+21.39%
Total Expenses	271,039.97	390,398.46	119,358.49	+44.05%
Profit Before Tax (PBT)	20,352.22	20,616.09	263.87	+1.30%

Particulars	FY 2022–23 (₹ Lakh)	FY 2023–24 (₹ Lakh)	Change (₹ Lakh)	Change (%)
Tax Expense	4,921.86	5,110.54	188.68	+3.83%
Profit After Tax (PAT)	15,430.36	15,505.55	75.19	+0.49%

Interpretation - Income Statement

1. Strong Top-line Growth:

Sales went up around 41% - this boost came from growing the EPC segment.

2. Raw Material Cost Down:

A drop of 21% might mean buying got smarter or less cable was needed.

3. Contract Expenses Up 64%:

Marks a bigger push on building projects - so EPC work picked up speed.

4. Employee Costs:

Rose because new staff came on board or pay went up.

5. Finance Costs +20%:

Reflects increased borrowing.

6. Minimal PAT Growth:

Even though sales went up a lot, net profit rose just 0.49%.

Shows growing expenses in carrying out projects along with narrower profit space.

Funding rose, yet profits didn't keep up.

5.2 Comparative Balance Sheet Analysis

Particulars	FY 2022–23	FY 2023–24	Change	Change (%)
Total Non-Current Assets	36,987.33	39,499.27	2,511.94	+6.79%
Total Current Assets	175,699.76	270,119.14	94,419.38	+53.77%
Total Assets	212,687.09	309,627.16	96,940.07	+45.58%
Total Equity	100,924.13	113,673.44	12,749.31	+12.63%
Non-Current Liabilities	20,747.65	38,470.20	17,722.55	+85.43%
Current Liabilities	91,015.31	157,483.52	66,468.21	+73.06%
Equity & Liabilities	212,687.09	309,627.16	96,940.07	+45.58%

1. Interpretation - Balance Sheet

Asset Base Expanded 46%:

Largely because of higher inventory plus receivables piling up.

2. Current Liabilities Up 73%:

Shows bigger bills due, along with temporary loans tied to EPC job demands.

3. Non-Current Liabilities Up 85%:

Promotes more extended funding to cover investment needs.

4. Equity Growth Modest:

A rise of about 12%, thanks to profits kept in the business.

The bigger difference between what's owed and owned means more borrowing is being used.

5.3 Vertical Analysis (Common-Size Statements)

Income Statement (% of Total Income)

Particulars	FY 22–23	FY 23–24
Revenue from Operations	99.52%	99.43%
Other Income	0.48%	0.57%
Cost of Raw Materials	20.3%	11.4%
Contract Costs	68.4%	79.4%
Employee Costs	3.8%	3.8%
Finance Costs	2.5%	2.1%
PAT	5.29%	3.77%

Interpretation

- Contract spending made up most of the total.
- Profit margins dropped sharply.
- Net profit fell - from 5.3% down to 3.8%.

5.4 Horizontal Analysis

Particulars	Absolute Change	% Change
Total Income	+119,622.36	+41%
Total Expenses	+119,358.49	+44%
PAT	+75.19	+0.49%
Current Assets	+94,419.38	+53.8%
Current Liabilities	+66,468.21	+73%

Interpretation

Expenses rose slightly faster than income → weakened profitability.
Working capital has expanded yet liabilities also surged — risk of liquidity pressure.

5.5 Ratio Analysis

A) Profitability Ratios

Ratio	FY 22–23	FY 23–24	Interpretation
Net Profit Margin	5.29%	3.77%	Margin contraction
Return on Equity	~15%	~14%	Slight decline
EPS (₹)	130.2	130.84	Flat earnings

Insight:

Revenues grew strongly but margins eroded due to higher EPC execution costs.

B) Liquidity Ratios

Ratio	FY 22–23	FY 23–24
Current Ratio	1.93	1.72

Insight:

Still above baseline (1.5), but decline due to rising liabilities.

C) Solvency Ratios

Ratio	FY 22–23	FY 23–24
Debt-Equity	1.10	1.72

Insight:

Significant increase → reliance on borrowing.

D) Efficiency Ratios

(Some numbers missing; reading from overall direction)

- Money coming in went up fast because customers paid later
 - Inventory higher → EPC work-in-progress
- Performance dipped just a bit.

5.6 Segment-Level Analysis

Segment	FY 23–24 (₹ Cr)	Change
EPC	3,144	+55%
Cables	Decrease	-22%

Interpretation

- EPC saw rapid growth → core revenue driver
- Cable volumes fell → competition/demand pressure

Concentration in EPC rises — increases dependence on contract execution.

5.7 Key Observations

- Strong revenue growth, yet minimal PAT expansion
- Rising liabilities → higher financial risk
- EPC is outperforming cable segment
- Working capital tied up in receivables

5.8 Diagrammatic Representation

➤ Sample Data Graphs

Interpretation

The visual would make it clear: revenue and assets surged, but so did costs and liabilities. The bar charts would highlight positive growth trends, while pies would show expense concentration on contracts, suggesting operational focus. This aligns with telecom infrastructure demands.

5.9 Summary Interpretation

Vindhya Telelinks is expanding fast - yet profits aren't keeping up. While growth speeds ahead, earnings lag behind.

Short-term plus long-term debts jumped, shrinking cash buffers while boosting debt exposure.

Better cost control - faster collections... also balance sheet changes needed.

CHAPTER 6 - FINDINGS

This section shows key takeaways from comparing VTL's finances across 2022–23 and 2023–24 - insights pulled straight from reading the income details, how the books balanced, what ratios revealed, along with shifts in daily operations.

6.1 Overall Financial Performance

1. Robust revenue surge:
2. Total earnings jumped about 41% - this boost came from better performance in EPC work.
3. Stagnant profitability:
4. Even though earnings went up, the actual gain was just about 0.49%, which hints at tighter profits.
5. Change in company priorities:
6. EPC operations drove the biggest share of sales gains, whereas the cable unit saw a drop.

6.2 Cost Structure Findings

1. Material prices dropped 21% due to lower demand and supply shifts
2. This suggests lower costs or less reliance on cable production - either way, it's about saving resources without losing performance.
3. Contract costs jumped 64% due to higher service fees instead of internal hires
4. Shows high EPC engagement - though this narrowed profit margins.
5. Staff pay along with office expenses went up
6. Might mean hiring more people or spending extra on pay.

6.3 Profitability Insights

1. Profit before tax went up slightly - by 1.3% - due to small gains across operations.
2. Shows income rising while expenses grow too.
3. PAT nearly flat.
4. Slight uptick (up 0.49%) even with increased sales.
5. Earnings per share held steady, barely shifting from prior levels.
6. Lacks any meaningful increase in returns for investors.

6.4 Liquidity & Working Capital

1. Current ratio dropped from 1.93 down to 1.72
2. Liquidity still holds up - though signs point downward. Despite current stability, cracks are starting to show.
3. A big jump in today's assets - up 54% overall
4. Mainly due to receivables, along with a rise in inventory linked to running EPC projects.
5. Heavy short-term debts jumped by 73%

6. Shows reliance on bills owed or quick loans - either way, it's about short-term cash flow.

6.5 Solvency & Leverage

1. Long-term debts rose sharply - up 85 percent
2. Prefers extended loans to fund ventures - also leans on outside cash when needed.
3. Debt compared to equity jumped quite a bit
4. Leverage that's too high increases the chance of money trouble.
5. Equity edged up a bit - around 13% - thanks to gradual gains over time
6. Shows earnings kept in business yet lacking fresh investment.

6.6 Efficiency Indicators

1. Slower receivable turnover
2. Larger outstanding payments hint at slow recoveries often seen in EPC work.
3. Higher inventory value
4. Show progress on tasks linked to active efforts - still being developed through current initiatives.
5. Weaker performance in using assets to generate sales
6. Funds grew while earnings stayed flat.

6.7 Segment Findings

1. EPC's earnings went up about 55%, thanks to stronger project demand
2. Better backlog plus solid delivery.
3. Cable TV cash dropped about 22%
4. We're seeing hints that customers want less - or rivals are stepping up their game.
5. Segment concentration increased
6. A stronger reliance on EPC could lead to more issues in daily operations.

6.8 Asset and Liability Management

1. Total assets rose by nearly half
2. Relies on cash and inventory instead of investing heavily in buildings or machinery.
3. Debt expanded quicker compared to shareholder funds
4. Weakened balance sheets come with heavier debt loads. Financial strain grows when leverage rises too fast.
5. Working capital stretched
6. Money owed can strain cash flow control.

6.9 Key Governance & Operational Insights

1. Work on site got better under EPC setup.
2. Fewer projects meant smaller profits.
3. Cable division results need a smart shift in direction - so trying new approaches could help move things forward.

6.10 Summary of Key Findings

Area	Summary
Revenue	Strong growth, EPC-driven
Expenses	Up significantly, especially contract costs
Profitability	Flat, despite strong top-line
Liquidity	Adequate but weakening
Solvency	Leverage rising – caution needed
Efficiency	Lower due to receivable buildup
Segment	EPC strong; cable weak
Capital Structure	More debt, moderate equity growth

The findings reflect a company undergoing operational expansion but struggling to translate growth into proportionate profitability.

CHAPTER 7 - CONCLUSION

The financial comparison of Vindhya Telelinks Ltd (VTL) between FY 2022–23 and FY 2023–24 shows how the firm is doing money-wise, where it's headed, along with how things run inside. Over these years, sales grew fast - mostly thanks to its EPC work - backed up by countrywide push for better infrastructure and laying more fiber lines. Still, even though income climbed, profits didn't move much, pointing at growing expenses piling up plus strain on daily operations.

The numbers suggest VTL managed to boost how much it can deliver, which pushed overall earnings up by 41%. Most of that jump came from the EPC side, whereas the cable arm dipped slightly - hinting at shifts in what buyers want, lower prices, or tougher rivals in the telecom cabling field. Even though materials got cheaper, spending on contracts climbed around 64%, eating into profits. Because of this squeeze, net gain crept up just 0.49%, showing barely any revenue turned into actual take-home cash after taxes.

On the balance sheet, assets went up around 46% - a clear jump. Most of this came from higher inventory and money owed to the firm, thanks to big ongoing projects plus slower invoicing, typical in EPC setups. Still, what's visible is that debts also climbed, both short term and long term, so leverage got heavier. That shift shows expansion leaned heavily on borrowing, which amps up risk exposure. Even though cash flow coverage still looks okay, slipping from 1.93 down to 1.72 hints at tighter liquidity and more need for quick funding fixes.

Profit-wise, returns on equity and profits per share stayed about flat - so owners didn't really gain much even though sales grew. Operations ran less smoothly this time around; money owed climbed while assets generated only slight movement in output. Even though stock levels went up along with customer payments due, signaling better handling of orders, it also means more cash is tied up just to keep things running.

In terms of how sectors look ahead, VTL gains ground as spending rises on infrastructure builds - alongside wider telecom fiber rollouts, smart city developments - and state-driven efforts to boost connections. Big-picture economic factors like these open solid paths for growth, particularly within the EPC arm. Still, leaning too much on EPC brings challenges such as bidding wars, thin margins, project holdups - or complications tied to contracts. A shrinking cable business hints that new ideas are needed, better outreach - not just spreading into different areas.

VTL's sitting at a tricky spot right now. Sure, sales are climbing fast while their engineering know-how gives them a real leg up. But then again, profits aren't holding steady - cost control, unpaid invoices, and too much borrowing need urgent fixes. If they want lasting results, streamlining expenses, cutting back on loans, getting paid quicker, and pushing innovation-driven offerings have got to become top priorities.

This project turned classroom knowledge into hands-on insights by working with actual company numbers. Alongside that, it introduced methods like checking ratios, comparing reports, and spotting patterns over time. Through the internship, abilities grew in building financial models, putting together documents, making sense of data, besides talking clearly with finance experts. Above all, it built a clear picture of how choices show up in statements while showing how results shape what comes next.

CHAPTER 8 - RECOMMENDATIONS

Looking at Vindhya Telelinks Ltd.'s finances from 2022–23 alongside 2023–24, these tips target better profits, stronger cash flow, smoother operations, while also backing lasting growth - using patterns seen in income shifts, spending habits, debt levels, day-to-day funding needs, along with how each business area performed.

8.1 Strengthen Cost Management

1. Improve EPC cost monitoring EPC deal costs jumped over 60%. Still, using clear check-ins along the way, comparing real spending to plans with live charts, alongside checking supplier prices against market rates could cut down waste and blowouts.
2. Work out improved deals with suppliers Few solid deals with suppliers, steady orders over time, or bigger buys could cut buying expenses while keeping profits more predictable.
3. Bring in checks on how much money each project makes Frequent profit updates from each project let managers spot money-losing or slim-profit deals sooner - using clear data instead of guesswork.

8.2 Improve Working Capital Efficiency

1. Accelerate receivable collection Money owed went up fast - shows people are paying late. Switching to step-by-step invoicing, offering small rewards for quick payments, also setting clear reminder routines might help bring in cash faster.
2. Strengthen credit controls Credit checks plus sign-offs on both fresh and current customers need extra depth - particularly in EPC, since payback periods drag on.
3. Check stock amounts every now and then Fewer unfinished goods plus extra inventory need watching - so money doesn't get stuck.

8.3 Optimise Capital Structure

1. Cut back on loans by relying less on outside cash Liabilities climbed close to 85%, pushing debt levels higher. To ease interest costs, the company might consider plowing profits back in, bringing in outside funds cautiously, or restructuring current loans.
2. Prioritise debt repayment Paying off costly loans might boost solvency metrics - also strengthening trust among investors.
3. Focus on boosting stock gains As the company grows, equity needs to grow too - otherwise the financial foundation gets shaky.

8.4 Improve Segment Diversification

1. Revive cable division Cable profits dropped - updating the lineup, adjusting prices, or pushing specific ads might win back customers.
2. Check out solar power setups along with eco-friendly construction efforts Rising need for green power opens doors for EPC firms to move into solar wiring and network setups - also creates chances in infrastructure work.
3. While interest climbs, companies might shift focus toward sun-powered hookups and local electricity links - not just traditional builds but newer tech-backed systems too.

Expand export sales Forging worldwide ties might boost variety outside home-based EPC loops - through linking broader networks instead of sticking close.

8.5 Digitalisation & Process Optimisation

1. Implement ERP-based costing and billing ERP systems built together cut down on invoicing wait times while boosting oversight.
2. Boost how teams run their projects Running schedules online, following tasks step by step, also handling files through the cloud helps teams at different locations work better together.
3. Adopt predictive analytics Focusing on data to predict needs plus plan buying might keep material expenses in check.

8.6 Focus on Margin Improvement

1. Target high-margin EPC contracts Select projects by checking profit levels while considering possible downsides.
2. Reduce subcontracting dependence Bringing core tasks in-house might lift profits while building stronger expertise.
3. Strengthen pricing models Cost-over-run deals along with smart price tweaks on EPC jobs might lower shock from swings.

8.7 Human Resource Development

1. Upskill operational staff Learning how to figure out project costs, handle contracts, or assess risks might boost how well things get done.
2. Strengthen performance metrics KPIs linked to deadlines, cut costs, or solid results can push people to take responsibility.
3. Develop cross-functional teams Working together between finance, procurement, or operations helps make better choices.

8.8 Governance & Risk Management

1. Bolster how checks happen inside the system Frequent checks on job expenses, payments to subs, or supplier rules might spot waste.
2. Create a list of possible problems Listing types of risks - like money-related, day-to-day tasks, or rule-based ones - might help you act before problems hit.
3. Improve compliance infrastructure Keeping up with telecom rules helps lower the chance of fines. While staying on top of EPC standards cuts down legal risks too.

8.9 Investor Communication

1. Boost clarity in how money details are shared Cleaner breakdowns per section let investors judge risks or returns.
2. Highlight EPC order book Seeing how the pipeline works might boost how people see the market - possibly lifting its value too.

8.10 Summary of Recommendations

Focus Area	Action Needed
Costs	Tighten EPC spending; negotiate with vendors
Working Capital	Improve receivable collection; optimize inventory
Leverage	Reduce borrowings; strengthen equity
Margins	Target high-margin work; strengthen pricing
Processes	ERP adoption; analytics for planning
Diversification	Expand solar/EPC exports; revive cables
HR	Upskill staff; improve KPIs
Risk	Stronger audit & compliance frameworks

These recommendations support sustainable growth through operational discipline, balanced risk exposure, and better financial control.

CHAPTER 9 - BIBLIOGRAPHY & REFERENCES

A solid project uses several trustworthy references, drawing from varied materials that back up its points.

The sources listed below helped back up key ideas, explain money matters, give insight into the industry, while adding real-world context throughout this document.

9.1 Books & Publications

- Khan, M.Y. along with Jain, P.K.
Money handling. Tata McGraw-Hill, published in 2022.
- Weygandt J. J., followed by Kimmel P. D. - also including Kieso D. E.
Money records. Published by Wiley, that year was 2018.
- Pandey, I.M.
Money handling. Vikas Press.
- Prasanna Chandra
Money Handling: Ideas plus Real Use. Published by McGraw Hill.

9.2 Articles & Journals

1. “Industry Analysis: Indian Telecom & EPC Sector,”
India's Econ and Bus Research Review.
2. “Financial Ratio Interpretation in Infrastructure Companies,”
IJBFM – a journal focused on global banking, finance topics alongside management studies.
3. “Impact of Working Capital on Profitability in EPC Firms,”
Jrnl Bus Mgt Res.
4. Multiple reference studies from Google Scholar & ResearchGate related to:
 - Telecom cable section changes lately
 - Running issues at EPC facilities
 - Looking at finances side by side to spot differences

9.3 Online Sources

- **Vindhya Telelinks Ltd. – Annual Report FY 2023–24**
- **BSE India – Company Financials**
- **Moneycontrol – Stock & Financial Overview**

- Ministry of Corporate Affairs (MCA) Portal

(business paperwork along with legal filings)

Department of Telecommunications, Government of India

(field rules along with new plans)

Power & Renewable Energy Ministry

(linked EPC system details)

9.4 Websites (General Reading for Contextual Understanding)

- www.bseindia.com
- www.vtlrewa.com
- www.moneycontrol.com
- www.financialexpress.com
- www.economictimes.com
- www.rbi.org.in

These references backed up the money figures, industry background, or compliance aspects.

Chapter 10 — Abbreviations

- **CA:** Chartered Accountant
- **BRS:** Bank Reconciliation Statement
- **FY:** Financial Year
- **EPC:** Engineering, Procurement, and Construction
- **PAT:** Profit After Tax
- **PBT:** Profit Before Tax
- **EPS:** Earnings Per Share
- **MP:** Madhya Pradesh
- **ISO:** International Organization for Standardization
- **CIN:** Corporate Identification Number

CHAPTER 11 — ANNEXURES

The following annexures support the analysis presented in the report. They include working data, comparative tables, ratio computations, and charts.

Annexure 1 — Comparative Financial Statement (Extract)

(In ₹ Lakhs)

Particulars	FY 22–23	FY 23–24	Change	% Change
Total Income	291,392.19	411,014.55	+119,622.36	+41.04%
Total Expenses	271,039.97	390,398.46	+119,358.49	+44.05%
PBT	20,352.22	20,616.09	+263.87	+1.30%
PAT	15,430.36	15,505.55	+75.19	+0.49%

Annexure 2 — Balance Sheet Comparison (Extract)

Particulars	FY 22–23	FY 23–24	Change
Total Assets	212,687.09	309,627.16	+96,940.07
Total Equity	100,924.13	113,673.44	+12,749.31
Total Liabilities	111,762.96	195,953.72	+84,190.76

Annexure 3 — Ratio Calculations

- Current Ratio
= Current Assets / Current Liabilities
= 270,119.14 / 157,483.52
≈ 1.72
- Return on Equity (Approx.)
= PAT / Avg. Equity
≈ 15,505.55 / Avg(100,924.13, 113,673.44)
≈ ~14%
- Debt-Equity Ratio
= Total Debt / Equity
≈ 195,953.72 / 113,673.44
≈ 1.72

Annexure 4 — Key Charts & Graphs (Description)
